

PERSONAL FINANCE MOBILE APPLICATION

Phase 0 Design Specification

Accounts, Data Model, Rules, Budget Basis and Behavior Design

Document	Phase 0 Design Specification
Revision	2 (supersedes Rev. 1)
Date	October 2, 2026
Prepared for	Eufracio N. Mabingnay, Jr.
Source data	FINANCES.xlsx; Project Summary; 20 Phil. JAC and TSI payslips; 45 receipts, bills, screenshots and app screens
Next stage	Phase 1 build in Claude Code on the web (Sonnet model)

Principal changes from Rev. 1: Utilities line removed (rent includes utilities); laundry moved to Essentials (₱1,700); parents' electricity moved to Family (₱3,850); Overrun Buffer reduced to ₱2,000 with ₱1,027 redirected to the Emergency Fund; Apartment Fund target set at ₱20,000; Mole Removal moved to November 2026; spendable balances and card status recorded; pending versus posted card charges and trip tagging added to the data model; Taiwan trip funding plan recorded.

- [Annex D: Abbreviations](#)

Each entry links to its section. The PDF also carries a bookmark panel.

1 Introduction

1.1 Problem Statement

The current system is a Google Sheets workbook (FINANCES.xlsx) with input sheets, an effective-dated rules sheet and computed outputs. Verification against source documents for this revision found that its weaknesses are larger than recorded in Rev. 0:

- **Silent formula defects.** Overtime is recorded on the Salary Tracker but excluded from gross pay on every Phil. JAC row; about ₱15,680 of income since March 2026 never reached the budget (Annex A).
- **Single-entry double counting.** A credit card bill payment (₱5,510) and buy-now-pay-later repayments were logged as expenses in addition to the purchases they paid for.
- **Capture gaps.** May to July 2026 were largely unlogged; on two sample days, ₱3,382 of transactions were missing from the log.

1.2 Objectives

- Replace the spreadsheet with a phone application built on double-entry accounting.
- Make capture fast and verification a fixed daily habit; catch the remainder by weekly reconciliation.
- Track debit accounts, the credit card, the card reserve, savings pockets, deposits and receivables.
- Set budgets from observed behavior and verified income, not aspiration.

1.3 Scope of Version 1

Version 1 (v1) delivers the ledger core: accounts, goals, manual entry with presets, the card reserve, templates for recurring items, the effective-dated rules engine, the budget dashboard, the verification inbox and the weekly check-in. Photograph extraction is Version 2 (v2); voice capture is Version 3 (v3).

2 Design Basis

2.1 Double-Entry Accounting

Every transaction moves value between accounts, and its entries sum to zero, in the same way every applied load has a reaction.

Event	Entry 1	Entry 2
Salary received	Metrobank +	Income +
Debit purchase	Expense +	Debit account –
Credit card purchase	Expense +	Card liability +
Card reserve set-aside	Reserve +	Debit account –
Card bill paid from reserve	Card liability –	Reserve –
Transfer between own accounts	Destination +	Source –
Security deposit paid	Deposit (asset) +	Source –
Charge to be refunded	Receivable (asset) +	Source –
Refund received	Destination +	Receivable –

Table 2.1 Entry pairs for typical events

2.2 Classification

Closing test: if an account were closed today, one that hands money back is an asset; one that demands payment is a liability. Income is a flow into an account (the inflow pipe), not the account itself (the reservoir level). Purpose does not change class: GoTyme is an asset whether its money is saved or spent.

2.3 Transfers, Payments and Refunds

- Transfers between own accounts net to zero and never count as spending.
- Paying a card or buy-now-pay-later bill reduces a liability; it is not an expense. The purchase was the expense.
- A charge that is being refunded is a receivable, an asset, until the refund arrives. Cash has left, but net worth is unchanged.
- A rental security deposit is an asset held by the landlord, recorded at full value until returned, less any deductions.

2.4 Card Reserve Invariant

Credit Card Reserve balance $\geq$ MariBank Credit outstanding balance

Known causes of a break without overspending: interest on an unpaid remainder, annual and late fees, foreign transaction and conversion charges, refunds credited to the card, installment billing, and transfer fees.

2.5 Effective-Dated, Append-Only Rules

Carried over from Expense Assumptions History: an existing rule row is never edited; a change is a new row with its effective date. Transactions keep their original category permanently; merges are reporting maps only. Structural changes are verified by comparing reports before and after.

2.6 Stored Facts, Applied Policy

Facts are stored at true values; policies are applied at display. The hidden 10% net-salary buffer of the spreadsheet is retired. Its role is taken by the explicit Overrun Buffer (Section 6.4).

3 Accounts Register

Balances as observed on October 2, 2026. Account and card numbers are not stored; cards are identified by the last four digits only.

Account	Class	Role	Balance (₱)	Notes
Metrobank	Asset	Payroll inlet	~2,500	App setup pending; cash hop to GoTyme is temporary
GoTyme main	Asset	Main reservoir	3,565.00	Merchants attached (Claude Pro); exposed to auto-debits
GoTyme GoalSave: Emergency	Asset	Emergency Fund	12,915.88	Not auto-debitable; 3% p.a.
GoTyme GoalSave: Sinking Funds	Asset	Travel / Sinking Fund	2,002.35	Allocated to Taiwan trip
GoTyme GoalSave: Family	Asset	Family Fund	1.37	Effectively empty
GoTyme GoalSave:	Asset	Goal, target ₱10,000	3,006.52	

Account	Class	Role	Balance (₱)	Notes
Mole Removal				
GoTyme GoalSave: Bills	Asset	Apartment Fund (misabeled)	6,707.87	To move to Maya Savings
MariBank Debit (Savings)	Asset	Daily spending; reserve envelope	264.19	Auto Repayment debits this account on the due date
MariBank Credit (ending 1236)	Liability	Credit building	1,089.00	Limit 52,500; ₱185 posted + ~₱904 pending; first statement Oct 16, 2026
Credit Card Reserve	Asset	Envelope in MariBank Debit	0.00	Opening gap ₱1,089 funded on Oct 15 payday
GCash	Asset	Rides, load; Overrun Buffer envelope	657.31	Conditions in Section 6.4
Maya Savings	Asset	Apartment Fund	0.00	To be opened; wallet not used
Coins.ph	Asset	Idle	31.53	Crypto (XRP, ETH); archive
Cash	Asset	Pocket money	6,965.00	Counted weekly
Rent deposit	Asset	Held by landlord	3,350.00	From Feb 26, 2026 move-in
ClassPass receivable	Asset	Refund owed	2,790.00	Approved Oct 2; expected by about Oct 16
Atome	Liability	Closed	0.00	Paid in full; archived

Table 3.1 Accounts register

PayPal is not a ledger account. It must hold no linked card or bank as backup funding; it is not used for subscriptions. MariBank and Maya both display loan offers (Mari Loan, Easy Credit); these are not funding sources.

4 Income Basis

4.1 Verified Pay Structure

Phil. JAC pays semi-monthly with an unequal split. The first payday carries basic salary only, plus the previous month's overtime, with no deductions. The second payday carries basic salary and allowances less all statutory deductions. Basic salary rose from ₱9,000.00 to ₱9,357.25 (July 16) and to ₱9,776.98 (August onward).

Payday	Typical net (₱)	Composition
1st (15th)	9,776.98 + overtime	Basic only; no deductions
2nd (month end)	23,000.39	Basic + ₱17,000 allowances – tax, SSS, PhilHealth, Pag-IBIG
Base per month	32,777.37	Planning income, overtime excluded

Table 4.1 Income basis from payslips (Annex C)

4.2 Overtime Rule

Overtime occurred in 5 of 7 months (about ₱2,100 per month on average) and is excluded from planning income. When received: 60% to the Emergency Fund; 40% free to spend, still logged.

5 Budget and Payday Split

Line	Per month (₱)	1st payday (₱)	2nd payday (₱)
Daily spending (Food 4,000; Lakat/Date 6,500; Shopping 1,000; Essentials 1,700 incl. laundry)	13,200	6,600	6,600
Rent (utilities included)	3,350		3,350
Upskill	1,000	1,000	
Subscription (Claude Pro)	1,500		1,500
Family Fund (incl. parents' electricity)	3,850		3,850
Apartment Fund (Maya Savings)	3,350		3,350
Emergency Fund	3,377	1,177	2,200
Sinking Fund (Travel)	1,150		1,150
Overrun Buffer (GCash envelope)	2,000	1,000	1,000
Total	32,777	9,777	23,000

Table 5.1 Monthly plan by payday

Each payday funds its own half of the month. The former ₱650 Utilities line (a residual of observed Bills/House spending, never a measured bill) is removed: rent includes utilities, laundry (about ₱300 per month) moves to Essentials, and the parents' electricity bill (about ₱1,000 to ₱1,200 per month) is part of Family support. Values are provisional and are re-derived after the trial week and one month of application data.

Food presets: Lunch ₱95, Dinner ₱95, Breakfast ₱20.

5.1 Comparison with the Spreadsheet Plan

Line	Old plan / month (₱)	Actual average (₱)	Rev. 2 plan (₱)
Bills/House	6,700 (rent + hidden apartment savings)	~4,000	3,350
Food	6,000	3,641	4,000
Lakat/Date	4,000	6,627	6,500
Family	1,000	3,477	3,850
Shopping	500	1,104	1,000
Essentials	2,200	1,350	1,700
Upskill	1,000	3,125 (lumpy)	1,000 + Subscription 1,500

Table 5.2 The old plan was misallocated rather than too tight: Food overfunded, Lakat/Date and Family underfunded

6 Savings Goals and Rules

6.1 Goals

Goal	Balance (₱)	Target (₱)	Funding
Emergency Fund	12,915.88	28,200	₱3,377/month + 60% of overtime + buffer sweep after Mole Removal; reached in about 3 months
Apartment Fund	6,707.87	20,000	₱3,350/month to Maya Savings; reached in about 4 months (around February 2027)
Sinking Fund (Travel)	2,002.35	Open	₱1,150/month; current balance funds the Taiwan trip; also funds lumpy upskill costs
Mole Removal	3,006.52	10,000	Month-end buffer leftover; target November 2026 (moved from Oct 16 because of the trip); ClassPass refund may be added
Family Fund	1.37	—	₱3,850/month; remittances and parents' electricity drawn from it

Table 6.1 Savings goals

Emergency Fund target = $3 \times (\text{Bills/House } 4,000 + \text{Food } 4,000 + \text{Essentials } 1,400) = \text{₱}28,200$. On job loss, the Emergency Fund is drawn first; the Apartment Fund is the second line.

6.2 Savings Ratchet

Condition	Action
Starting amount	₱3,500 per month (Emergency $\frac{2}{3}$, Sinking $\frac{1}{3}$), plus a fixed ₱1,027 to the Emergency Fund outside the ratchet
Target met for the month	Raise by ₱500
Missed once	Hold
Missed two months in a row	Lower by ₱500
Floor	₱3,000 per month
Emergency Fund target reached	Its share is redirected to long-term savings

Table 6.2 Ratchet rules; savings move out on payday before spending

6.3 Family Fund

Remittances averaged about ₱3,477 per month against a former ₱500-per-cutoff budget; September reached ₱4,708. Recurring support includes the parents' electricity bill (July ₱977.77 plus ₱801.69 June arrears; September ₱1,157.84). The plan funds ₱3,850; overruns draw on the buffer and, if repeated, raise the line by a new dated row.

6.4 Overrun Buffer

The buffer is ₱2,000 per month. It lives in GCash as an envelope tracked by the ledger, hidden from available spending. It is drawn only when a category overruns, and each draw is recorded against that category. Conditions:

- PayPal holds no backup funding source linked to GCash.
- The ledger tracks the buffer separately from the ride and load allowance in the same wallet.
- When the allowance envelope reaches zero, the application warns that further GCash spending draws the buffer.

Month-end rule: unused buffer goes to Mole Removal until it reaches ₱10,000, then to the Emergency Fund. Repeated draws on one category signal an under-budgeted line, corrected by a new dated budget row.

6.5 Subscriptions

No subscriptions by default; the card for any free trial is decided before signing up. Registered subscriptions carry card, renewal date and an exit condition.

Subscription	Card	Renews	Exit condition
Claude Pro (US\$22.40, about ₱1,500)	GoTyme main	20th monthly	Review Dec 20, 2026: keep if it generates ₱5,000/month or supports a valued learning project (owner's values choice)

Table 6.3 Subscription register; foreign-currency amount corrected at verification

7 Data Model

Entity	Principal fields
Account	id, name, class, role, hidden_by_default, archived, opening_balance, opening_date
Goal	id, account_id, name, target, deadline (optional), hidden_by_default
Envelope	id, account_id, name, purpose (for example buffer inside GCash)
Transaction	id, date, payee, memo, status (draft, verified), source (manual, preset, template, photo, voice, import, reconciliation), reference_no, created_at, verified_at
Entry	transaction_id, account_id or category_id, envelope_id (optional), amount (signed); entries sum to zero; several category lines allowed (split receipts)
Category	id, name, kind; never renamed destructively; includes Unlogged and Subscription
CategoryMap	from, to, effective_from; reporting merges only
BudgetRule / SavingsRule / AllocationRule	effective-dated, append-only
Template	payee, amount, accounts, schedule (rent, Claude Pro, Family Fund, payday transfers)
Preset	name, amount, category (Lunch, Dinner, Breakfast)
PayeeRule	payee pattern → category
Subscription	name, card, currency, amount, renewal day, exit condition, review date
CheckIn	date, account, counted balance, ledger balance, difference
Attachment	transaction_id, type, file, file_timestamp
Tag	id, name, budget (for example Taiwan 2026, ₱13,095 brochure budget)
Card entry state	pending or posted; reserve covers pending plus posted
Foreign amount	currency, foreign_amount, rate; peso amount corrected to the posted value

Table 7.1 Entities

7.1 Checks on Every Save

- Entries of each transaction sum to zero.
- Reserve balance is at least the card's outstanding balance, pending plus posted (the bank's 'current outstanding' shows posted only: ₱185 posted against ₱1,089 used on Oct 2).
- Only verified transactions count toward budgets; drafts show as pending.
- Duplicate check on reference number plus amount; amount alone is insufficient.
- Rules are append-only.

- Amounts stored as integer centavos; dates in Philippine time (UTC+8); cutoffs computed from dates.

8 Capture, Verification and Reconciliation

8.1 Load Reduction

- Expenses are logged daily, using presets and the Quick Log Shortcut (about 5 seconds per entry).
- Templates create drafts for rent, Claude Pro, Family Fund and payday transfers on their dates.
- Card reserve transfers are generated with each credit purchase.
- Transfers to other people (for example family remittances) are logged individually, because they are expenses.
- Other own-account transfers are captured by the weekly balance check-in.
- Trip expenses carry one tag, so actual spending can be compared against the trip budget afterward.

8.2 Verification

Each morning, the previous day's drafts are verified as part of the morning routine. Typing is automated; looking is not: every entry passes the owner's eyes once.

8.3 Weekly Check-In

Each account balance and the wallet cash are entered. Differences become reconciliation entries; unexplained cash differences post to the Unlogged category, whose weekly size measures logging discipline.

8.4 Extraction Requirements (v2)

- Classify: receipt, payslip, transfer screenshot, bank alert, payment request (a bill, not a payment), invoice.
- Cross-check amount in words against figures; flag disagreement (move-in receipt: words ₱6,700, figure 7,000).
- Sanity-check the year against context (a 2026 receipt written as 24).
- Ask for debit or credit mode when hidden; handle rotation, folds, shadows, thumbs over text.
- Fall back to the file timestamp when no date is shown, flagged for confirmation.
- Support split receipts (Food and Essentials on one grocery receipt).

9 Behavior Design

Logging stopped in the heaviest spending month (ostrich effect). The application is firm, never harsh.

Firm (adopted)	Harsh (rejected)
Reminder persists until logged	Red alarm screens
iOS Shortcut opens the logger before social media, YouTube or Chrome	Guilt or shaming messages
Over-budget figures shown plainly	Streak-loss penalties
Savings goals hidden by default, tap to reveal	Locking features as punishment

Table 9.1 Firm versus harsh enforcement

Full automation reduces the felt cost of spending; the design automates entry but keeps one deliberate look at every entry and a weekly physical cash count.

10 Platform, Development and Security

10.1 Platform

Progressive Web App (PWA): free, runs on iPhone and Android, installed to the Home Screen from a free static host. The ledger lives on the iPhone, where transactions and screenshots originate; the Android is optional, for probe comparison. Plain style: Arial, black and gray.

10.2 Development Without a Computer

The owner has no personal computer. Development uses Claude Code on the web (claude.ai/code or the Claude mobile app), which runs in Anthropic-managed cloud sessions and pushes to a personal GitHub repository; the host deploys each push. The PJI laptop is not used for this project.

Storage probe first: a one-page test app records check-ins in localStorage and IndexedDB and requests persistent storage; it is installed on the iPhone and checked on days 3 and 7. If data is lost, the fallback is an Expo build reusing this data model.

10.3 Security

- Local-first; no server stores the ledger; encrypted backup only.
- Passphrase: two independent copies (paper at home, flash drive), stored apart, never with the phone.
- No real financial data, screenshots or payslips are committed to the repository.
- Cloud sessions can reach every repository the connected GitHub account can see; the PJI NMIA code on that account must be moved to company-controlled storage or the exposure accepted (Section 12).
- Photograph and voice processing (v2, v3) are per-item and opt-in.

11 Build Phases and Model Handoff

Phase	Content	Model and tool
0	This specification, fixtures, decisions	Opus, chat
0.5	Storage probe on iPhone (days 0, 3, 7)	Sonnet, Claude Code on the web
1	Ledger core, goals, envelopes, presets, templates, reserve, rules, dashboard, inbox, check-in, backup	Sonnet, Claude Code on the web
2	Photograph capture scored against Annex B fixtures	Sonnet, Claude Code on the web
3	Card cycles, reminders, subscription register, reconciliation screen	Sonnet, Claude Code on the web
4	Voice capture reusing Phase 2 extraction	Sonnet, Claude Code on the web
5	Import history (with Annex A corrections); retire FINANCES.xlsx	Sonnet, Claude Code on the web

Table 11.1 Build phases

Switch to Claude Code: now for Phase 0.5; for Phase 1 once this revision is accepted and the probe passes day 7.

Return to Opus for: schema changes, ledgers that do not balance, unexplained extraction failures, and a security review before real payslips are stored.

12 Open Items

No.	Item	Blocks	Status
1	Storage probe: install, then report days 3 and 7	Phase 1	Open
2	PJI NMIA code on the personal GitHub account: move, or accept exposure	Phase 0.5	Open
3	Confirm MariBank Auto Repayment pays the full statement balance, not the minimum	None	Open
4	Oct 15 payday: fund the reserve's opening gap (₱1,089) and any trip credit (cap ₱1,500) first	None	Open
5	Taiwan trip (Oct 10–12): funded by spendable balances ~₱13,950, Sinking Fund ₱2,002, trims ~₱1,000, credit ≤ ₱1,500; tag all trip expenses	None	Open
6	Open Maya Savings; move ₱6,707.87; rename GoTyme Bills pocket	None	Open
7	ClassPass refund ₱2,790: confirm arrival by about Oct 16	None	Open
8	Log Oct 1 Puregold ₱592.50 (MariBank Credit) and its reserve transfer	None	Open
9	Add Sep payslips to the tracker; correct overtime	Phase 5	Open
10	Unexplained log entries: Mar 14 ₱950 Rent; Jul 31 ₱1,650 Rent (July–August period has no receipt)	Phase 5	Open
11	Confirm PayPal has no linked funding source	None	Open
12	Metrobank app setup (removes the cash hop)	None	Open
13	Trial week: iPhone-only transactions; pass ≥ 90% logged against bank histories	None	Open
14	Fixtures still missing: a ride receipt, a credit card statement (first due Oct 16), voice clips	Phase 2	Open

Table 12.1 Open items. Closed since Rev. 1: Mole Removal deadline (November 2026); Utilities line resolved

A Annex A: Data Findings from FINANCES.xlsx

Finding	Evidence	Correction
Overtime excluded from gross on Phil. JAC rows	Mar ₱2,763.32 (typed 2,700), May ₱3,806.88, Jul ₱2,731.04, Aug ₱3,414.84; Sep ₱2,966.80 not logged	About ₱15,680 income restored on import
Card bill logged as expense	Apr 2 'Maribank Credit' ₱5,510 under Bills/House	Reclassify as liability payment
Buy-now-pay-later double count	Apr 1 Atome purchase ₱806.45 and Jul 31 Atome ₱1,750 both expensed	Repayment reclassified
Deposit expensed	Feb 27 'BH' ₱6,700 = ₱3,350 advance + ₱3,350 deposit	₱3,350 to Rent deposit asset
Rent inflated by savings	Rent ₱3,350 budgeted per cutoff; extra held in GoTyme 'Bills' pocket	Rent ₱3,350/month; Apartment Fund separate
Unlogged transactions	Jun 27 rent ₱3,350; Oct 1 ₱592.50; Oct 2 ₱2,790; May–Jul largely blank	Weekly check-in; Unlogged category
Category drift	Laundry and a flash drive under Bills/House; coffee under Upskill (fixed by owner)	Payee rules; review at verification
Name inconsistency	'Breakfast' and 'Break Fast'	Presets
Plan misallocation	Food planned 6,000 vs 3,641 actual; Lakat/Date 4,000 vs 6,627; Family 1,000 vs 3,477	Rev. 2 budget (Table 5.2)

Table A.1 Verified findings

B Annex B: Fixture Register

Type	Count	Lessons
E-wallet and bank transfer screenshots (GCash, MariBank, GoTyme)	11	Duplicates, self-transfers, missing dates, occlusion by floating button
Payment request screens (Atome QR)	2	Bill, not payment
Card payment screen (GoTyme to ClassPass)	1	Foreign merchant; later refunded
Thermal receipts (Puregold)	2	Rotation, split categories, hidden debit/credit label
Handwritten rent receipts	5	Words vs figures, ambiguous year, deposit plus advance
Payslips, Phil. JAC (two layouts)	15	Unequal paydays, overtime line, amounts in words
Payslips, TSI (prior employer)	5	Different layout and deduction set
App balance screens (GoTyme GoalSave, Maya, Coins.ph)	4	Pockets, crypto balances
Invoice (Anthropic PDF)	1	US dollar amount with VAT
Electricity bills (Samar II Electric Cooperative)	2	Long thermal invoice; arrears line; total vs bill amount
Family transfer screenshots (GoTyme)	4	Remittances; one with no date visible
Additional rent receipts	3	Completes rent timeline except July–August
MariBank, GoTyme, GCash balance and card screens	5	Pending vs posted; exchange rates; statement date

Table B.1 Fixtures received October 2, 2026 (45 items); identification numbers are not recorded

C Annex C: Income and Spending Derivation

Month (2026)	1st payday net (₱)	2nd payday net (₱)	Overtime (₱)	Total (₱)
March	11,763.32	20,990.61	2,763.32	32,753.93
April	9,000.00	21,868.19	—	30,868.19
May	12,806.88	22,645.78	3,806.88	35,452.66
June	9,000.00	21,821.01	—	30,821.01
July	11,731.04	21,786.70	2,731.04	33,517.74
August	not supplied	23,000.39	3,414.84 (tracker)	—
September	12,743.78	23,000.39	2,966.80	35,744.17

Table C.1 Net pay from payslips (true values, no buffer)

Category	Mar	Apr	Aug	Sep	Mean	Remark
Bills/House	4,635	10,436	3,420	3,350	5,460	Apr includes ₱5,510 card payment (Annex A)
Food	4,396	2,862	2,923	4,382	3,641	
Lakat/Date	8,092	6,666	5,819	5,930	6,627	
Family	500	5,500	3,200	4,708	3,477	
Shopping	850	40	2,643	883	1,104	
Essentials	962	469	2,569	1,401	1,350	
Upskill	9,690	0	0	2,810	3,125	Lumpy; Sep includes Claude ₱1,500

Table C.2 Observed monthly spending, well-logged months

D Annex D: Abbreviations

Abbreviation	Meaning
EF	Emergency Fund
SF	Sinking Fund
PWA	Progressive Web App: a web application installable to the Home Screen
QR	Quick Response (code)
SSS	Social Security System
UTC	Coordinated Universal Time
VAT	Value-added tax
v1, v2, v3	Version 1, 2, 3 of the application
